Electronic Visit Verification (EVV) is a system which electronically verifies that home or community-based service visits occur by capturing and documenting six points of data:

- Type of service performed
- Individual receiving services
- Individual providing services
- Date of the service
- Location of the service
- Time services begins and ends

EVV is a federal mandate under the 21st Century Cures Act that requires compliance by Medicaid agencies by January 1st 2020.

Click here for Medicaid guidance on electronic visit verification.

**What EVV System will Palco use?**

Palco has partnered with FirstData to provide stakeholders with one of the best EVV platforms that exists nation wide.

**When will EVV be implemented?**

EVV must be implemented for all AR IC program recipients by March 30th of 2021.

**How will the six data points be captured?**

Palco clients will have the choice of utilizing the EVV mobile app or a telephony option. Location is captured at only the beginning and end of the visit. It does not require a microphone, photographic, or video recording. Geo-fencing, facial recognition, or biometrics are not used.
**What is the mobile application and how does it work?**

The mobile application is a FREE smart phone app developed by the EVV vendor that captures the date, time and location of the attendant when clocking in and out. It uses your WiFi connection or minimal cell data to send information. As an example, the attendant arrives at the home or starts the visit in the community (shopping, medical, etc.) and before starting services, opens the EVV vendor’s mobile app to clock in.

**How long does clocking in/out take?**

We estimate the average time to be less than one minute.

**Do agency based services have to use EVV also?**

Yes. Any agency providing services that are mandated as part of the 21st Century Cures Act will be required to comply.

**How will service details collected through EVV be kept safe?**

All Medicaid data, EVV related or not, is stored on secure servers that are managed and maintained by Palco. We are responsible for ensuring the data meets state cyber security and Health Insurance Portability and Accountability Act (HIPAA) requirements.

**What is telephony and how does it work?**

Telephony or Interactive Voice Recognition (IVR) is a method of EVV used via the participants landline phone. The attendant uses the landline phone to call in at the beginning of the shift and call out at the end. Calls are to a toll free number and voice prompts guide the entire process.

**Can the EVV solution be used in rural areas?**

The EVV Solution is designed to work across the state. The mobile application will work without cellular service and can upload information when service is restored or connected to WiFi. The telephony/IVR option can be used with any landline.
What happens if there is a mistake with the time entry?

Training and information will be available about how to make a manual entry or adjustment to time entered. This should only be used as a special exception and not as a regular practice.

When will training be available?

Palco will be providing AR IC program participants and their careworkers training opportunities in the month of March to learn about EVV. Call our Customer Service team to learn about attending!

What if my careworkers or I do not have a smart phone device?

If you do not have the ability to use the mobile application, you will be required to use a landline home phone within the participants house. This option is called Telephony and allows the workers to clock in and out by calling a toll free number and following the prompts.

Can I use the Telephony/IVR option from my cell phone?

No. This option must be used via the participants landline home phone in order to capture all the required data as part of the 21st Century Cures Act.

My careworker is employed by two participants and has the mobile app, can they use the same mobile phone for both participants?

Yes! In fact, it is a requirement. When registering with Palco the careworker should indicate the same mobile device ID for all participants they work for and only register one device.
